RFN202 Painters Color Adjustment Techniques I

Description

This one-day course tackles the single biggest concern of the refinish industry: How to achieve precise color matches. Attending the course is like getting an entirely new sense of color. Using a practical, step-by-step, mechanical approach, participants learn what causes color variations and how to make adjustments to achieve an acceptable color match.

In the classroom portion of the course participants learn about color theory and the elements of color. They learn how to evaluate a full spectrum of colors, and get the basic tools they need to detect color differences. Students who successfully complete this approved training are eligible to apply for I-CAR credits.

Performance Objectives

This program will enable participants to:

- Determine and understand color variations
- Use the Glasurit Color Matching Manual
- Evaluate colors at a glance
- Adjust colors “at the spray gun” by learning adjustments and variables
- Achieve color variations using intermix tinting bases
- Understand how strength and properties of mixing bases affect color matching
- Use paint application procedures and blending techniques with the Glasurit product line

Target Audience

This is a “must” course for refinish painters and jobber personnel who need to understand color and want to improve their color matching skills.

Locations

BASF North American Application & Training Center or Regional Training Facilities.

Registration

Register using our e-learning portal at refinish-elearning.basf.us or by calling the BASF Training Enrollment Center at (800) 201-1605. You may also contact your local BASF distributor or sales representative.

Course Length

One day (8:30 a.m. - 4:30 p.m.)

Class Size

Limited to 8 participants

Languages

Conducted in Spanish at selected facilities
